SUMMARY

Technical lead who designs and builds the systems a manufacturer runs on: Salesforce architecture and development, platform integrations, and trade-compliance automation. Learned the platform through the developer docs and production work, not a classroom. Works directly with the CEO, owns projects end to end, and rolls out new systems with an employee-first approach so the people using them feel empowered, not audited. Also designs and builds interactive web and 3D experiences — this portfolio included.

EXPERIENCE

Technical Lead, Systems — Manufacturer of signage & outdoor products

Kelowna, BC · YYYY – Present

- Own Salesforce architecture and development end to end (Apex, Flows, Lightning components, Experience Cloud), working directly with the CEO.
- Built the quote-to-order process: grouped quote lines and fees, automated quote/job numbering, opportunity-to-order conversion and a historical order backfill.
- Built a shipping hub inside Salesforce integrated with Freightcom and UPS, generating commercial invoices (PDF) with customs line items automatically.
- Designed a tariff and customs classification system for a 6,000+ product catalog: HTS code registry, tariff rules (Chapter 99 / Section 338), duty calculation and CUSMA certificates.
- Consolidated costing data from QuickBooks, Salesforce and four department spreadsheets into one model (materials, vendors, BOMs); leading the ERP evaluation (ERPNext).
- Connected HubSpot and Salesforce via API and cleaned up CRM data; built Conga document templates and an Agentforce inquiry-enrichment agent.
- Run self-hosted infrastructure (Docker, Nextcloud) and the integrations around it.

SELECTED CASE STUDIES

Customs & tariff classification engine

Built: An HTS code registry and tariff-rule model in Salesforce that calculates duty per line (incl. Chapter 99 / Section 338), sorts CUSMA certificates by HS code, and an AI-assisted tool to propose classifications for review.

Outcome: Every product line can be classified and costed for customs from one source of truth instead of spreadsheets and guesswork.

Salesforce · Apex · Custom objects · Next.js · Claude API

Shipping & commercial invoice integration

Built: A shipment tab on the order that books and imports shipments through the Freightcom API, plus a commercial-invoice object with lock-and-send and PDF generation, wired for UPS Paperless Invoice.

Outcome: Shipping and customs documents come straight from order data — fewer re-typed fields, fewer errors at the border.

Salesforce · Apex · Lightning components · Freightcom API · UPS API

Quote-to-order rebuild

Built: Grouped quote lines with fees, automatic quote/job numbering, auto-linking quotes to opportunities, order activation with order summaries, and a backfill that brought historical opportunities in as orders.

Outcome: One continuous flow from quote to fulfilled order, with history in the system for reporting.

Salesforce · Flows · Apex · Experience Cloud

Costing data consolidation & ERP evaluation

Built: One relational model of materials, vendors, products and BOM lines pulling from Salesforce and QuickBooks, then an ERPNext trial as a QuickBooks Desktop replacement with real manufacturing BOMs.

Outcome: Leadership can see true product cost in one place, and the ERP decision is based on the company's real data.

Airtable · Salesforce · QuickBooks · ERPNext

Salesforce CMS image tools

Built: A drag-and-drop uploader that captures alt text and outputs a ready-to-import zip with JSON manifest, and a Lightning app to search CMS images and bulk-associate them to products.

Outcome: Marketing can load and attach a product's images in minutes instead of editing spreadsheets of URLs.

Salesforce CMS · Lightning · JavaScript

SKILLS

Salesforce	Apex, Flows, Lightning (LWC / Aura), Experience Cloud, Quote-to-order, Commerce Cloud, Data Cloud, Marketing Cloud & Account Engagement, Agentforce, Conga
Integrations	REST APIs, HubSpot ↔ Salesforce, Freightcom, UPS, Zapier / Make / n8n, Airtable
Trade compliance	HTS classification, CUSMA, Chapter 99 / Section 232 / 301 / 338, Commercial invoices
Systems & data	ERPNext, QuickBooks, Docker, Nextcloud, Postgres / SQLite, Python
Web & creative	JavaScript / TypeScript, React / Next.js, Three.js / WebGL, Blender, GIS / OpenStreetMap, Product photography
AI	Claude API, Agent workflows & MCP, AI image generation

SIDE PROJECTS

- **Groc** — Python · Flask · Postgres · Claude API · GitHub Actions groc-2.vercel.app
- **Hook Generator** — Three.js · CSG · TypeScript · Vite braincandydan.github.io/Model-Gen
- **Zodiax** — Vanilla JS · SVG · Cryptography braincandydan.github.io/zodiax
- **Ski Run** — Next.js · React · Canvas · TypeScript braincandydan.github.io/ski-app
